Lithium Market

June 2019

PLEASE DO NOT DISTRIBUTE, SHARE OR DISCUSS THIS DOCUMENT OR ITS CONTENTS WITH ANY PERSON OUTSIDE YOUR ORGANIZATION

The ideas expressed in this document are highly confidential. If you choose to receive and review this document, you acknowledge and agree that the information herein is confidential and constitutes the property of **Waratah Capital Advisors Ltd.** All information, ideas and investment proposals herein are proprietary and shall form confidential information. This document and all materials delivered in connection herewith shall be kept private, not shared, disclosed or duplicated and no recipient shall use any of the confidential and proprietary information herein or therein to pursue a related investment idea without the written consent of **Waratah Capital Advisors Ltd.**

Important Disclaimers

Waratah Capital Advisers Ltd. ("Waratah") and INFOR Financial Group Inc. ("INFOR Financial" and together, the "Principals") and their representatives are providing this presentation solely for informational purposes. By reviewing this presentation, the recipient (i) acknowledges that the information contained herein is confidential and agrees that it will keep all such information confidential, (ii) agrees not to use the information contained herein for any purpose other than to evaluate a potential investment in a Royal Capital Limited Partnership sponsored by the Principals (collectively, the "Fund"), and (iii) shall be deemed to have agreed to the following:

This presentation does not constitute an offer or solicitation to sell or a solicitation of an offer to buy any interest in the Fund or any other product or service in any jurisdiction. This document is not intended for distribution to, or use by any person or entity in any jurisdiction or country where such distribution or use would be contrary to local law or regulation. In particular this document is not intended for distribution in the United States or for the account of US persons (as defined in Regulation S under the United States Securities Act of 1933, as amended (the "Securities Act")) except to persons who are "accredited investors" (as defined in Rule 501(a) under the Securities Act) and is not intended for distribution in Canada except to persons who are "accredited investors" (as defined under National Instrument 45-106 – *Prospectus Exemptions* or under Section 73.3 of the *Securities Act* (Ontario). The Fund is not, and will not be, registered under the Securities Act or the securities laws of any of the states of the United States and interests therein may not be offered, sold or delivered directly or indirectly into the United States, or to or for the account or benefit of any US person, except pursuant to an exemption from, or in a transaction not subject to, the registration requirements of such securities laws. The Fund will not be qualified by a prospectus for Canadian securities law purposes and interests therein may not be offered, sold or delivered to Canadians except pursuant to an exemption from the prospectus requirement. The securities will be subject to restrictions on transferability and resale. The Fund will not be registered under the Company Act. This document is not intended, and should not be construed, as marketing of any fund in any member state of the European Economic Area for the purposes of the Directive 2011/61/EU on Alternative Investment Fund Managers.

No investment in a Fund will be accepted solely on the basis of these materials. Any subscription in relation to the

This presentation contains preliminary information that is subject to change and that is not intended to be complete or to constitute all the information necessary to adequately evaluate the consequences of investing in the Fund. The information contained in these materials related to the terms and conditions of the Fund will be superseded, and is qualified in its entirety, by reference to the Offering Documents for the Fund, which should be reviewed for complete information concerning the rights, privileges and obligations of investors in the Fund.

Nothing in these materials should be construed as investment advice or a recommendation to invest in any securities that may be issued by a Fund or as legal, accounting, investment or tax advice. Any discussion or information herein relating to investment processes, portfolio characteristics or other matters relating to the Principals or the Fund is subject to change over time.

Before making a decision to invest in the Fund, a prospective investor should carefully review the definitive Offering Documents for the Fund and consult with its own legal, accounting, tax and other advisors in order to independently assess the merits of such an investment.

Forward Looking Information

These materials contain "forward-looking" information that is not purely historical in nature, and such information may include, among other things, projections, forecasts or estimates of cash flows, yields or returns, volatility, scenario analyses and proposed or expected portfolio composition. The words "anticipates", "assumes", "believes", "budgets", "could", "estimates", "expects", "forecasts", "intends", "may", "might", "plans", "projects", "schedule", "should", "will", "would" and similar expressions are often intended to identify forward-looking information, although not all forward-looking information contains these identifying words. The forward-looking information contained herein is based upon certain assumptions about future events or conditions and is intended only to illustrate hypothetical results under those assumptions (not all of which will be specified herein). Not all relevant events or conditions may have been considered in developing such assumptions. The success or achievement of various results, targets and objectives is dependent upon a multitude of factors, many of which are beyond the control of the Principals. No representations are made as to the accuracy of such estimates or projections or that such projections will be realized. Actual events or conditions are unlikely to be consistent with, and may differ materially from, those assumed.

The Fund has no operating history and there can be no assurance that the Fund will achieve its objectives or avoid incurring substantial losses. An investment in the Fund will be a speculative and illiquid investment that involves a high degree of risk. The Fund will have substantial limitations on investors' ability to redeem or transfer their interests, and no secondary market for the interests is expected to develop.

Certain information contained herein has been obtained from third parties considered to be generally reliable. While such information is believed to be reliable for the purpose used herein, the Principals and their respective affiliates, partners, members, officers employees or agents (i) assume no responsibility for the accuracy of such information (ii) make no representation or warranty, express or implied, as to the accuracy, adequateness or completeness of any such information used in these materials (including, without limitation, information obtained from third parties) and(iii) expressly disclaim any and all liability based on or relating to the information contained in, or errors or omissions from, these materials; or based on or relating to the recipient's use (or the use by any of its affiliates or representatives or any other person) of these materials; or based on any other written or oral communications transmitted to the recipient or any of its affiliates or representatives in the course of its evaluation of the Principals. The Principals undertake no duty or obligation to update or revise the information contained in these materials.

Overview

Electrification of Transportation is a once in a hundred year change thematic

The EV ecosystem is developing faster than expected – EV penetration and Lithium demand estimates are continually being revised upwards.

Range anxiety is diminishing as new EVs are launched with 500km+ in range

Unprecedented levels of capital investment to-date in the EV supply chain

More than \$215bn in capital has been committed for battery factories, conversion of car plants, and to secure raw materials

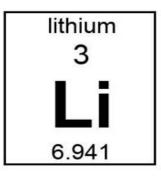

Demand projections imply the lithium market needs to grow 4x by 2025 to satisfy demand

New supply ramps have disappointed

New Lithium supply will arrive later than expected, cost more and be smaller than projected

Lithium Demand Supply

Why Lithium

Lightest metal on the periodic table

Highest electrochemical potential

Relative stability

Long cycle life

Ideal material for **Electric Vehicle Batteries**

Economically Scarce: Low Grade / High Cost / Impurities

Not in Pure Elemental Form: mineralized or in solution

Complex Chemistry: difficult to process to "battery grade" purity

Geography: Argentina, Chile, Brazil, Canada, Australia, China

Next Generation Li-ion Batteries

- Nickel-rich cathodes (from NMC111 to NMC622/811/9,0.5,0.5)
- Solid-state electrodes b)
- Graphene coatings

Lithium supply, to meet the rapid electrification of global transportation, is challenged

Next-Gen batteries increase energy density and lithium content

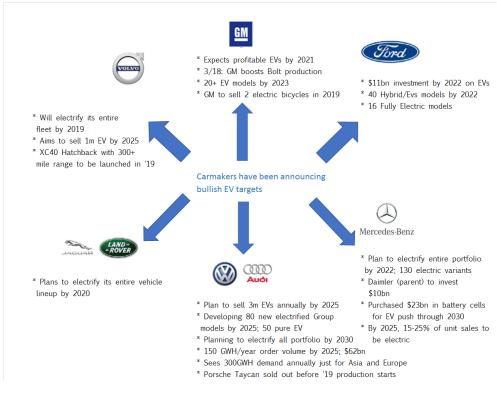

Lithium Demand Supply

Policy

Government policy and technological innovation are increasing Electric Vehicle ("EVs") penetration of global automotive volume

Currently +2% of all passenger vehicles are EVs. Consensus amongst consultants, investors, OEMs and investment dealers ranges from 10% to 25% EV penetration by 2025

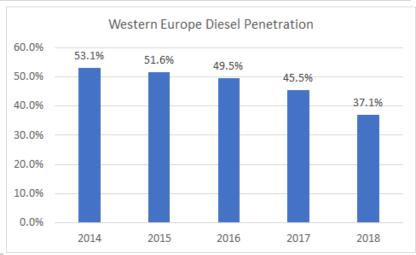

- China is in the process of banning internal combustion engines ("ICE") by 2040
- Norway is banning ICE by 2025
- France is banning ICE by 2040
- United Kingdom is banning ICE by 2040
- India is banning ICE by 2040
- Israel to ban import of gasoline based cars by 2030
- Germany is in discussions to ban ICE by 2030
- California is considering a ban on gas and diesel-powered cars

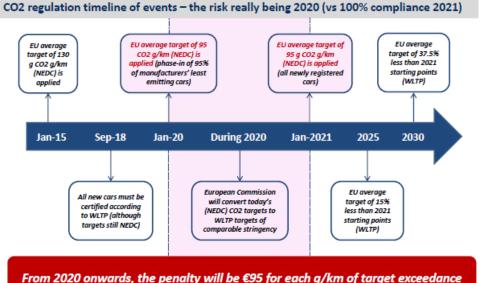

Emission Standards & Financial Penalties

Tightening global emission standards and the "Diesel Scandal" have caused OEMs to embrace EVs to meet emission compliance

- Diesel's market penetration, as a solution to increasingly stringent emission regulations, expanded from 0% in 1990 to over 50% of vehicles in Europe
- Diesel is now in structural decline in Europe
- Diesel > 1/5th CO2 of gasoline;
- Diesel > +30% Nitric Oxide (NOx) levels of gasoline

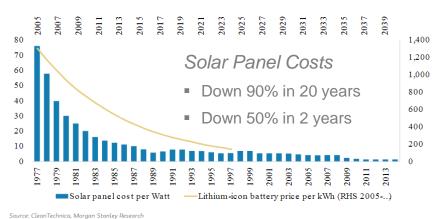

- Evercore ISI estimates EU manufacturers would face up to €33bn in fines in 2020/2021 relative to 2018 levels
- VW CEO estimates latest 2030 EU targets translate into more than 40% of total VW sales needing to be electric in order to comply

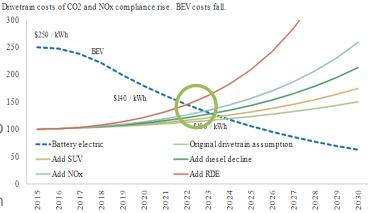

Innovation: Cost Parity

Scale and innovation are driving down battery pack costs (currently 40% of total EV cost) and increasing energy density (additional power/range without additional weight)

Total cost parity (capital, operating, insurance, tax, service, ¹⁵⁰ fuel/energy costs) is expected near term. EV cost could go ¹⁰⁰ below ICE as compliance costs, scale, innovation, taxes and model withdrawals occur

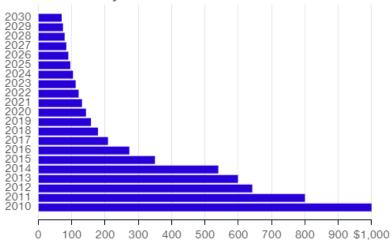

- Battery packs costs have fallen at a 20% CAGR since 2010 from US\$750/kWh to less than US\$150/kWh post the launch of the Telsa/Panasonic Giga factory
- 300% increase in lithium cost = 2.1% increase in battery pack costs (Bloomberg New Energy Finance)
- Several sub \$40,000 EV launches in 2018 (Renault, VW, Tesla, BMW, Nissan, Kia)

Note: NOx = Nitragen oxide emissions; RDE = real-world driving emissions testing. The chart assumes no major changes to battery cost calculations.

\$/kwh battery costs continue to decline

Source: BNEF

Note: Figures for 2018 and beyond are projections

Innovation: Extended Range & Fast Charging

"Range anxiety" has been a hurdle to consumer adoption

Average driver in the United States travels less than 30km per day

Porsche Mission E
2019 deliveries
440km range
80% charge within 15 minutes
China = 27% of Porsche's sales and 43% of total growth
At the L.A. Auto Show on 12/7/2018,
Porsche N.A. CEO "If all the people (who preordered) buy this car, then we are sold out for the first year"

New Battery Capacity

Global Lithium-ion battery capacity is expanding rapidly – these factories are fiercely competing for lithium resources

Capacity expected to grow at 18% CAGR through 2028

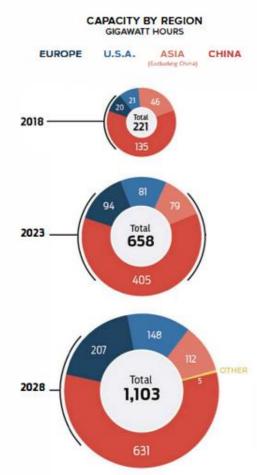

- Global capacity to expand by 400% through 2028
- Factories planned for USA, Poland, Hungary, South Korea and China
- Chinese capacity to grow 7x through 2028

China to dominate battery production

 China currently 64% of market and likely to have ~60% share in 2028

Significant investment from the industry

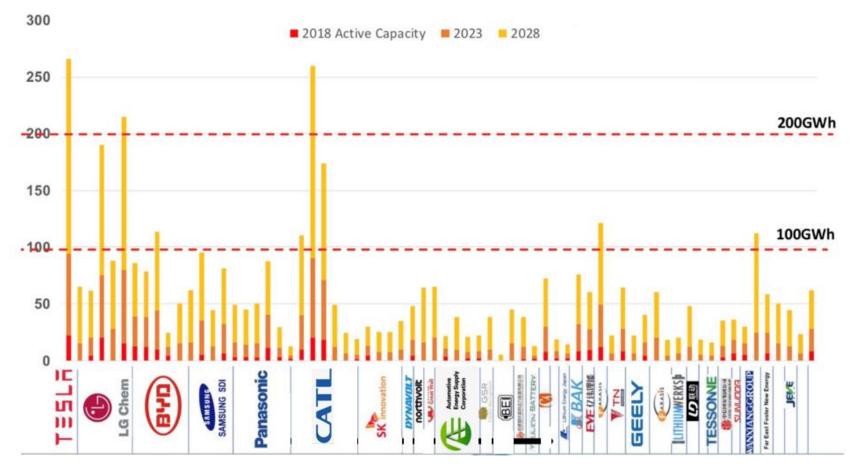

- Samsung is investing \$358m for a plant in Hungary
- LG Chem is investing \$387m for a plant in Poland
- CATL is raising \$2bn via an IPO to drive its expansion plans for battery capacity

New Battery Capacity by the Numbers

Battery expansions are happening across the globe with Chinese players leading the charge

- 1,456 GWh of battery capacity announced to the market by 2028
- Implies 1.2-1.3m tonnes of lithium carbonate equivalent

Source: Benchmark Minerals Intelligence, 1/19

Sunk Capital Expenditures

\$215B of capital has been committed for lithium resource development and lithium batteries

Growth of EVs and Lithium Demand

Multiples of current lithium supply is needed to reach near-term OEMs and Government EV goals

- Diesel replacement will require 250% of current supply
- Meeting 2030 EU emission targets implies 50% EV penetration or 200% of current supply
- China's and India's long term goals will require 400% of current supply

	tonnes of LCE	% of Total
	Required/Year	2018E Production
100% Diesel	658,125	244%
EU Emission Proposal (50% Evs)	541,627	201%
15-25% of Daimler Sales	29,250	11%
25% of VW Sales	121,875	45%
25% of Big 3 German OEMs	187,688	70%
Tesla Gigafactory - Phase 1	24,375	9%
Tesla Gigafactory - All Four Phases	97,500	36%
China, Current Goals	97,500	36%
China, @15% EV Penetration	176,963	66%
China, @40% EV Pentration	471,900	175%
India, 7m vehicles by 2020	341,250	126%

Assumptions: 75kWh battery pack, 0.65kg LCE/kWh, global car fleet growing at 3% pa

^{*} European Commission and European Council have agreed to reduce avg. CO2 emissions by 37.% in new cars by 2030; implying 50% EV penetration

China – Transformation Velocity

EVs are a strategic industry under "Made in China 2025"

- Industry of the future
- License restrictions on Tier 1 Cities for non NEV
- Shanghai license plate auction reached 87,400 Yuan (USD \$12,650)
- Nearly impossible to add new ICE capacity as of 1/10/2019
- Subsidies shifting to long range NEV, >300 km
- E-bus dominance domestically and internationally
- Shenzhen's reaches 99% e-taxi penetration at 2018 Year end (21,689 e-taxis)
- Up 61% in 2018 reaching 5.4% NEV penetration in 2018 and 10.3% in December

Importance Globally

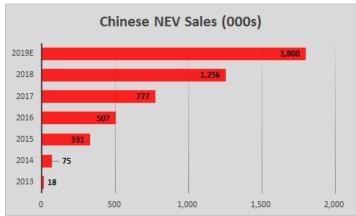

- China accounts for 29% of global auto sales, 80% of global auto sales growth
- 160mm autos, doubling auto fleet every five years

Impact on Oil

- \$160b of annual oil consumption, 70% imported
- Auto penetration at 15%, Japan at 60%, West at 80%
- China at 60% = \$1.7 trillion of annual oil consumption (=53% increase to global oil production)
- Taiwan Strait, Sea of Japan, East China Sea become bigger geo-political issues
- Growing dependence on Russia, Middle East and US

"War on Pollution"

- 1mm premature deaths per year
- Pollution is growing risk to political stability (Chengdu protest/Under the Dome)

Chinese companies acquiring lithium resources

- Gangfeng invests C\$174m in Lithium Americas
- Tianqi for Nutrien's 32/\$4.5b stake in SQM

Zooming ahead

China moves towards banning the internal combustion engine

Its government is developing a plan to phase out vehicles powered by fossil fuels

Growth of EVs and Lithium Demand

Estimates from analysts/consultants range from 10% to 25% EV penetration by 2025; this would require +300-400% more lithium supply

Long-term estimates call for EV penetration to increase to 60-80% levels, requiring 4x 2018 supply

		LCE Demand	Size of 2018E
	Year	k tonnes	LCE Market
Goldman Sachs Est	2025	1,000	3.7x
UBS Est	2025	1,115	4.1x
BAML Est.	2025	800	3.0x
Morgan Stanley Est.	2025	727	2.7x
Roskill Est.	2027	1,200	4.4x
Benchmark Minerals Est.	2028	1,214	4.5x
Average		1,009	3.7x

Livent (previously FMC Lithium) estimates 12% EV penetration by 2025, equivalent to <u>1 MM tpa LCE demand</u> based on a car by car model in consultation with global OEMs

Assumptions: 75kWh battery pack, 0.65kg LCE/kWh, global car fleet growing at 3% pa

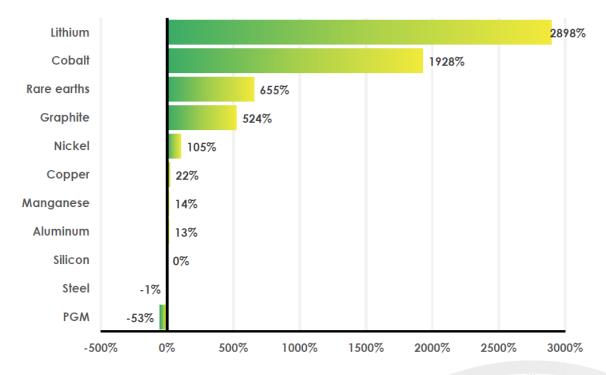

UBS on Lithium Demand

Per November 2018 report, UBS estimates **17.5m** electric vehicles in 2025 or 1.15m LCE tonnes

Lithium is the Commodity most-Impacted by Growth in EVs...

Lithium supply must increase 30x in a 100% EV world

% Lift in Battery Material Demand from 100% EV Penetration

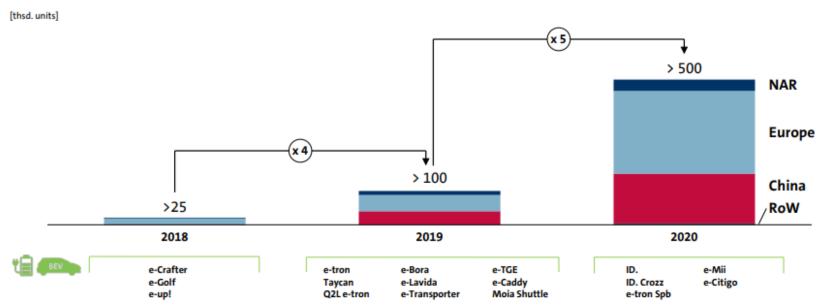

Source: UBS Securities

Deconstructing Volkswagen's Demand

Volkswagen is the #1 automaker in the world and fully committed to EVs

- Has secured 150 GWH of battery capacity annually by 2025 via a €50 billion procurement order
- VW foresees annual demand of 300GWH+ from Asia and Europe alone
- Demand to increase ~10x from 2020 to 2025; company forecasts imply at least 20k tonnes of LCE demand in 2020 vs. ~1k in 2018

Volkswagen Group – Expected BEV volumes by Region 1) (2018 – 2020)

Source: VW 1Q19 Presentation, Company data

Additional Sources of Demand

Urban Mobility an Overlooked Growth Driver

- Urban mobility encompasses two wheeled vehicles such as scooters, bicycles and motorcycles
- As of December 2017, there were 700 million urban mobility vehicles in China almost exclusively powered by lead-acid batteries
- 27m urban mobility vehicles were sold in China in 2017
- Lithium-Ion technology represented 2.6% of all urban mobility vehicle sales in 2017 but it is quickly displacing lead

Lithium has many advantages over lead acid such as:

- Three times longer battery life
- Weight convenience
- Environmental friendly and easily recyclable

Converting the existing Chinese urban mobilit Vehicle fleet equates to

~500k tonnes of demand or nearly 200% of 2018E demand

Assumptions: 75kWh battery pack, 0.65kg LCE/kWh

Source: CIC

Corporate Interest Level High

Albemarle announces 50% joint venture with Mineral Resources for Wodgina for USD\$1.15bn

Daimler to buy \$23 billion of battery cells in EV push

VW announces it will spend \$50 bn on electrification, digitalization, autonomous, and new mobility from 2019-2023. VW announces it has sourced batteries for 50 million electric cars.

Mitsui and Co. of Japan provides \$30mm off-take financing for Sigma Lithium Resources

Albemarle acquires 50% interest in Mineral Resources Wodgina project for \$1.15 billion

BMW announces option to acquire USD425 million shares in Chinese battery manufacturer CATL (largest electric vehicle battery manufacturer globally) following reports of BMW's USD 4.7b battery procurement contract with CATL in July 2018

LG Chem announces \$2 billion investment in Car Battery Plant in China

CATL Raises USD \$840 million in initial public offering as it seeks to increase battery capacity to 50GWH by 2020 from 12GWH

BYD Signs agreement to build 20GWH battery plant in Chongqing, China for USD \$1.4 billion

Softbank invests \$100 million into Nemaska Wabouchi project (Quebec)

Toyota fully funds \$361 million Orocobre phase 2 production (Argentina)

VW announces \$48 billion in battery purchase contracts

SQM acquires 50% stake in Kidman Bald Hill project (Australia)

Posco pays \$280 million for assets from Galaxy Resources (Argentina)

Kidman signs take-or-pay off-take agreement with Tesla for 25% of production (\$165 million per year)

BMW signs lithium-ion battery contract with CATL for \$1.1 billion

Tianqi announces agreement to acquire 32% of SQM from Nutrien (Potash Corp) for \$4.5 billion

Gangfeng, Posco, Great Wall Motors and General Lithium all sign long term off-take agreements for \$100 to \$150 million per year from Pilbara Minerals

Gangfeng invests \$174 million in Lithium Americas

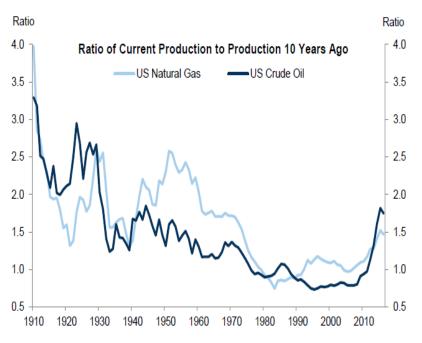

Lithium Demand Supply

Quadrupling?

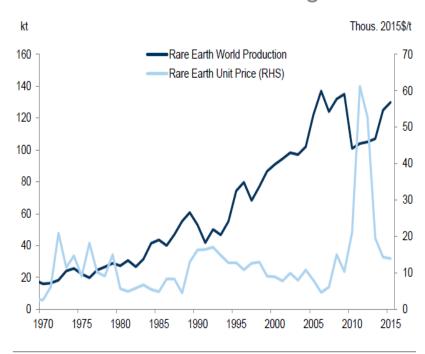

Quadrupling of supply can occur but is uncommon, capital intensive - without precedent

Source: EIA, Goldman Sachs Global Investment Research

Quadrupled; Over 30 Years Ago

Source: USGS, Goldman Sachs Global Investment Research

Past Supply Shortfalls

US Geological Survey indicates 14mm tonnes of global reserves; equivalent to 80 years of current production

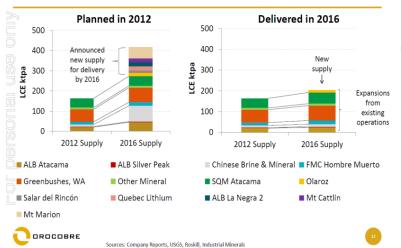

Lithium is abundant but economically scarce due to low grade and prevalence of impurities

Purification for battery grade applications is complex, capital intensive and expensive

Roskill production estimated released <u>in 2012 called for 690kt Lithium Carbonate (LCE)</u> production by 2017

- 2016 actual production was 175kt
- Current 2017 production estimates are <u>210kt (30% of original forecast)</u>
- Reasons: low quality resource, un-delineated resource, inadequate pre-engineering, brine brownfield difficult

WHAT IS EXPECTED IS NOT ALWAYS DELIVERED

Supply Growth is Challenging

Universal Mining Constraints

- Capital
- Labour
- Cost increases
- Bottlenecks

Specific to Lithium

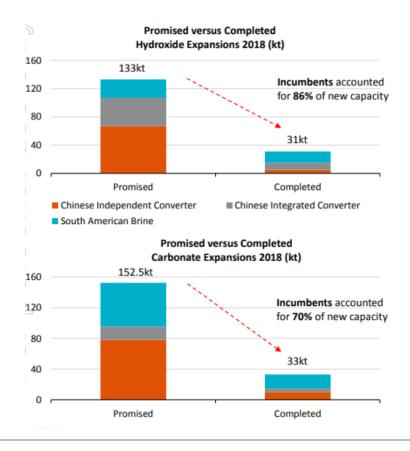

- Technical issues
- Resource inconsistency
- Geopolitical risk
- Environmental issues
- Lack of expertise
- Complex chemistries
- Elevation (14,000 ft)

Recent Supply Shortfalls

Industry is still facing issues ramping up supply in a timely manner

Incumbent advantage evident in ratio of capacity successfully ramped up

New entrants are required to satisfy demand growth as ~15-30% of the market in 2018 was supplied by new entrants

Source: Orocobre

Ramping Up is Difficult in Lithium

Albemarle - La Negra II

- February 2012 Rockwood announces \$140m investment to expand production at La Negra; expects to increase annual production from ~25k tonnes to 50k tonnes by the end of 2013 (Source: Rockwood Sustainability Report
- July 2015 Announces commissioning of 20k tonnes La Negra II carbonate plant; expects commercial quantities by 3Q15
- February 2016 Announces permission to increase extraction rates from the Salar de Atacama
- 2017 Delivered ~2-3k tonnes of material from La Negra II
- 2018 Estimated to have produced up to 40% of nameplate capacity

5 years to deliver first commercial quantities

Min Res / NeoMetals – Mt. Marion

- October 2010 Project approved for development
- September 2015 Announce the start of construction phase; expect first production from the project in mid-2016
- November 2016 Announces commissioning of the plant
- February 2017 Delivers first lithium concentrate shipment
- FY2018 55% of product is high grade (6% concentrate) and 45% is low grade (4% concentrate)
- CY1Q19 MIN produces 6% material for 66% of production, remainder is 4% product

3 years from first construction and production is still producing low grade material

Orocobre - Olaroz

- April 2009

 JORC compliant Scoping Study calls for 15k tonnes of production at capex of \$80-100m USD
- October 2010

 Anticipates 2012 production start
- May 2011 DFS updates capex to \$207m USD and operating cost of \$1,512/tonne (for 16.4k tonnes)
- December 2013 Announces project construction is 70% complete
- November 2014

 First primary lithium carbonate production
- CY 4Q15 Produces 937 tonnes
- April 2018 Lowers production guidance from 14k tpa to ~12.5k tpa (71% operating rate). Cost of production at \$4,356/tonne
- FY2019- still operating at close to ~12,500tpa; 72% of nameplate

8 years to reach 50-75% operating rate Operating costs ~3x initial expectation

New Supply

Salar de Atacama is the largest lithium mine in the world, 28% of total global production

75,000 tpa of expected production

Incremental LCE demand of 500,000 or 1,000,000 tonnes per year is equivalent to 7 to 15 new Atacama's over the next 7 to 10 years

The Atacama evaporation ponds are 1,700 hectares or 4,200 acres in aggregate

- Central Park = 349 ha, 840 acres
- 1 Atacama = 5x Central Parks

1 Atacama = 5x Central Parks

Supply In Context - Salar de Atacama

500k - 1,000k tpa would require 7-15 new Atacama's to meet coming demand

= 35 - 75 Central Parks or ~2.5x Manhattans

= US\$6 bn to \$13 bn billion of capex @ \$15,000/tonne capital intensity

Project Status Updates

Takeaways from recent project developments

- Operating costs increase by 25-50% from initial feasibility studies
- Capex 50%-100% higher than initial projections
- Delays common
- Environmental and political risk is increasing, likely to lend to further delays and less new production
- 484,000 tonnes of expected new supply is either delayed or facing material increase in costs or both

Name	Country	Company	Status	Capex	Opex	Op Cost	Op Cost	% Change	MS Start	LRC Start	Est. Nameplate

Supply – The Rhetoric Vs. Reality

Supply side response continues to lag – delays in project construction, commissioning and capacity expansions, as well as product quality issues remain a challenge

- Supply growth continues to disappoint
 - Combination of operational, execution and financing challenges
- Development assets coming online late and are facing continued ramp-up and commissioning challenges
 - Operating costs higher than anticipated in study work
- Environmental, licensing and execution challenges have led to delays in several greenfield project expansions
- Highly leveraged balance sheets and expensive cost of capital pose high risk in a lower commodity price environment
- Australian concentrate or DSO out of the ground does not necessarily translate to effective chemical LCE's supplied into the China market

Delays in Key Project Constructions and Expansions

Project	First Production Guidance	Actual First Shipment	2018E Sales (LCE)	2018TD Sales ¹ (LCE)
Atacama	na	na	55kt	30.5kt
Pilgangoora ³	Q1 2018	Q4 2018	11kt	1.1kt²
Pilgangoora ³	Q4 2017	Q4 2018	16kt	0.7kt ²
Bald Hill ³	Q1 2018	Q2 2018	17kt	4.7kt ²
Olaroz	na	na	17kt	8.9kt
La Negra 2 ⁴	2016	2017	14kt	Est. 6kt
Wodgina ^{3,4}	Q4 2018	na	85kt DSO 6kt	22kt DSO -

Source: Investment Banking Research, Company disclosure Notes:

- 1. As at 30 September 2018
- 2. Includes shipments completed in early October
- 3. Assumes 8 tonnes of lithium concentrate per 1 tonne of LCE
- 4. Analyst estimates

Supply Response

LRC Global Supply Model

- 1. 30% of 2012-2017 estimated supply came online
 - Must risk adjust new capacity additions
- 2. Marginal cost of production is going from \$6,500 to \$9,000
 - Operating costs are understated, do not include royalties or sustaining capex
- 3. Low impurity, high grade resource is limited
- 4. Technical expertise is limited
- Greenfield and Brownfield brine projects are capital intensive, complicated non-uniform chemistry and extended timelines
- 6. New process flow sheets and process technologies will be challenged
- 7. Direct Shipping Ore will come out of market due to processing issues and high cost (\$14,800/T)
- 8. Scale of supply response to meet demand is massive
 - 10 new Atacamas required, 1 every year for 10 years
 - Equivalent of \$9b capex
- 9. LRC estimates 500k+ tonnes of expected supply as extremely high risk to come into production
 - Challenges such as high costs, high reliance on by-products, low grade, jurisdiction risk, new technology/flowsheet

Benchmarking Costs

LRC Global Supply Model – Normalized Costs

- 1. Add government royalties, privately owned royalties
- 2. Add marketing fees
- 3. Exclude by-product credits
- 4. Add sustaining capital costs

Typically, costs are 14-18% higher than reported cash costs and as high as 90-150% for others

Spodumene and DSO Economics

Source: Company Data, LRC estimates

China cost based on CRU estimates for Yichun and Maerkang mines.

Conclusion

With greater scale and innovation battery costs are continuing to decline making EV's cheaper and longer range

EVs are set to reach cost parity with internal combustion engines in the early 2020s

EV ranges of 500km+ are increasingly common eliminating range anxiety as a concern for consumers

Industry investment is accelerating with over \$215bn of sunk capital

2025 demand targets imply supply must grow 4x the 2018 market

Market requires near perfect execution of high grade projects to satisfy demand in 2025

The lithium market has consistently seen production shortfalls

Supply will be higher cost and arrive later than the market expects
